Please read this manual carefully before use!

- To ensure that you can use this product correctly and safely, please read this manual carefully before using it.
- After reading, please memorize the operation method and keep it properly.
- If the product is changed, no further notice will be given.
- **Precautions:** Any faults and losses resulting from failure to comply with the precautions mentioned in this manual are not covered by the manufacturer's warranty, and no factory assumes no legal responsibility. **Please keep all instructions and related documents properly. If you have any questions, please contact the company or your local dealer; we sincerely hope feedback to your valuable opinions and suggestions.**

PRESSURE COOKER SAFETY INSTRUCTIONS

1. Brief description of the use

When cooking in a pressure cooker, water is added to food. Pressure cookers are suitable for all types of stoves. This pot can be used to cook different foods, especially those that usually take longer to cook. For example: **meat**, wheat porridge, **vegetables**, sideproducts of grains and beans, **meat** such as white porridge, chicken, strips, etc.

The pressure cooker uses the principle of high pressure and **explosion-free sealed cooking**. In order to ensure that you can use it **it is safe**, please read the following instructions carefully before use to avoid accidental injury caused by improper use.

2. Safety principle

- The parts of the pressure cooker must be replaced.
- The temperature of the pot body and lid is very high after heating. Please avoid direct contact with the high temperature surface. Use the handle and pressure valve handle.
- Do not use a pressure limiting valve to heat the pot lid when it is not fully closed, in order to avoid affecting the normal start-up of the safety mechanism and causing safety risks.
- Do not add weight to the pressure limiting valve or replace it with other heavy objects.
- Do not let the pressure cooker dry turn, use for frying, dry or dry water.
- Please use a pressure cooker on a stable heating source and do not move pressure cookers with pressure inside. Be extra careful when moving pressure cookers containing liquid and steam, and be sure to hold the handle of the pot body with both hands when moving.
- Pressure cookers should not be left unattended, especially in areas close to children, and children should not be allowed to come into contact with them.
- There is any abnormality in the use of the pressure cooker and the safety device function in the instructions, for example, if there are signs of leakage, damage or deformation, please stop using it immediately and do not repair it yourself.
- For different foods, please check according to the requirements of the limited capacity in the instructions. For use by body food, microwave and other tools that will produce various harm and obstruct the use, please avoid using them.

- Wait until the food is cooked and there is no pressure in the pot before opening the pressure cooker. Cooking meat that smells and has skin should not be cut out before the skin is expanded to avoid splashing soup and causing burns.
- Before use, please check if the exhaust pipe and anti-blocking cover are blocked.
- Mirrors are not allowed to use pressure cookers.
- Do not use this product in microwave ovens, ovens, and other stoves.
- This product is a household pressure cooker. Except for home cooking, the pressure cooker cannot be used for other purposes, especially for high-pressure frying.
- Please do not modify any safety device except for the maintenance specified in the instructions. Improper use may cause injury. Please use it correctly according to the user manual.
- The rubber parts and sealing gaskets with a service life of 1-2 years of each valve are consumables. Replace them when they have the same model or accessories from our company in a timely manner.
- When using this product, if the pressure limiting valve starts to release steam, do not immediately turn off the heat or adjust the heating source power to low. Otherwise, there may be rebounding of the injury or loss.

3. Precautions

- 3.1 Do not dry burn. Dry burning can easily damage the sealing gasket and components such as the handle, so please do not dry burn.
- 3.2 Please do not add too much material and do not use excessive firepower.
- 3.3 The amount of cooking, including ingredients, water, and seasonings, should not exceed the limit capacity specified in the user manual. Especially when cooking food that is easy to expand and block, such as beans, cornmeal that is easy to bubble, the total amount of water added to food should not exceed half of the height of the pot. At the same time, the total amount of water added to food during the cooking process, please immediately reduce the heat to the lowest level for cooking until the food is cooked.
- 3.4 Please do not use baking soda or large amounts of oil, alcohol, alcohol, etc.
- 3.5 Solid and other foods that can easily produce a lot of bubbles, as well as a large amount of oil, alcohol, etc., can affect the safety performance of pressure cookers. Please avoid using them. Additionally, it is recommended not to use oil when cooking sticky foods.
- 3.6 During the heating process, please do not remove the pressure limiting valve, open the pot cover, or move the pot body.
- 3.7 If the pressure limiting valve is removed, the pot lid is opened, or the pot body is moved during the heating process, it will cause steam, not injury, and other liquids to spray out, so please do not perform the above operations.
- 3.8 When exhausting steam in areas other than the pressure limiting valve, please immediately turn off the heating source.
- 3.9 If the exhaust pipe is blocked during the heating process, it will cause the safety valve or other places to exhaust steam. At this point, please quickly turn off the heating source and do not touch or move the pressure cooker. Wait for the pressure inside the pot to drop until all pressure is released before proceeding to the next step.
- 3.10 After draining all the steam, the lid can be opened.

After using a pressure cooker, even if the heat is turned off, there is still some pressure inside the pot. Therefore, please leave the pressure cooker for a period of time to confirm that there is no pressure inside before opening the lid.

4. Instructions for use

Please refer to 4. Instructions in detail before using it for the first time, especially paying attention to the "safety principles".

4.1 Preparation work

Before using the pressure cooker, please remove all accessories from the pot body, remove all labels on the pot wall, and clean the pot body and all accessories with warm water and a mild detergent; then carefully reading the manual paying special attention to the "safety principles", master the correct usage method, and apply a small amount of cooking oil on the pot body and sealing ring for easy opening and closing. Then inject half a pot of cold water and heat it according to the correct operating method by the design method until the pressure limiting valve releases for about 10 minutes. Turn off the heat to cool down and reduce the pressure, then open the pot lid and drain the water in the pot to remove the oil of the new pot.

4.2 Security check

Before each use, please open the anti-blocking cover and carefully check whether the exhaust is unobstructed towards the light source. Check if the anti-blocking cover, pressure limiting valve, and safety valve are clean. If there is a blockage, it must be cleaned and cleaned immediately. Check if the sealing gasket is in the correct position, which is the correct position.

4.3 Capacity control

When adding food and liquid, please use liquids that can generate steam when boiling, such as water, soup, etc., regardless of the size of the pressure cooker, the total volume of cooked meat and fish should not exceed two-thirds of the height of the pot, the total volume of cooked soup, beans, corn, rice and other expandable food should not exceed one-third of the height of the pot.

Attention: The liquid added to the pot must be a liquid that can produce steam, such as water, soup, etc. Strictly control the amount of food cooked each time according to the characteristics of the food.

4.4 Correctly cover

When closing the lid, align it with the pot body, fasten the lid, press the trigger until it is parallel to the food cover as shown in the following figure.

Attention: When closing the lid, keep it parallel to the pot mouth and gently press down on the trigger. If it cannot be closed, please check whether the safety valve is in a retracted state, and then press the trigger fast cover with your hand and lock it. After locking, please check the lock and the relevant content of "trouble-shooting". Do not forcefully close and damage the accessories.

4.5 Correct movement

When moving the pressure cooker, hold the handle on both sides with both hands and place them gently. Remember that the trigger is only used for opening and closing the lid. Do not lift the pot body with the trigger to avoid damage to the accessories due to improper force. When there is no pressure inside the pot, do not move the pressure pot case.

Attention: When the lid and body of the pot are closed, if you move the pot, you must not directly hold the trigger to move it, in order to avoid danger!

4.6 Heating control

In order to better protect the health of the pressure cooker, please ensure that the pressure cooker is placed flat on the floor. When heating, make sure that the flame does not exceed the bottom of the pot and turn the pot wall so as not to burn and damage the handle. When using an electric stove, choose one with a diameter equivalent to or slightly smaller than the bottom of the pot.

At the beginning, a small amount of steam will be discharged from the safety valve, which is a normal phenomenon. Later, it will automatically stop. When the pressure limiting valve is closed, the exhaust, the trigger should be immediately reduced and the intermittent exhaust state of the pressure limiting valve should be maintained until the food is cooked.

When the pressure cooker is working on a fire source or when there is pressure inside the pot, do not move the pressure cooker, you must hold the handle of the pot body with both hands and move it smoothly. Place it gently and do not allow any vibration.

Attention: When the steam is stably discharged from the pressure limiting valve, the firepower should be immediately reduced. Monitor the pressure limiting valve exhaust and make a slight sound, return to the "Cooking Time Reference Table" and the food is cooked. When there is pressure inside the pot, please do not move or drag the pot body. Do not dry burn to avoid damaging the pot body and sealing ring.

7. Cooking and pressure reduction

After cooking the food, close turn of the heating source and wait for the pot to cool and naturally reduce pressure at room temperature.

Attention: Please do not place the pressure cooker in the cold part of water, especially at the handle, while it is still in a high temperature and fast state, as the handle attachment between extreme cold and heat, which can easily cause cracking.

4.2 Open the lid of the pot

Please wait until the steam has completely returned to its original position before opening the pot lid. Before opening the lid, please first remove the lower pressure limit valve and confirm that there is no steam discharge from the exhaust pipe. When opening the lid, hold the trigger with your hand and pull it up to the end open the lid to ensure that the lid is open to straight up and down, do not tilt the lid.

Attention: It is strictly prohibited to force press the stop valve when it is in the rising state and directly open the lid for dry trigger. Due to the high pressure inside the pot, abnormal operation will cause food splashing inside the pot, resulting in serious burns.

5. Product Structure

- 1. Pot body handle: Used when moving cookware.
- 2. Sealing rubber ring: The function of complete sealing, easy to install, good sealing performance, must be replaced when using, and there should be no foreign objects.
- 3. Air release valve: When the pressure is too high, the valve core will pop out, and the pressure will be released from there to ensure safety.
- 4. Stop opening safety valve: Automatically close the safety valve during normal operation, and automatically exhaust steam to ensure safety when overpressure occurs. When the pressure inside the pot reaches 2MPa or above, the stop opening safety valve will rise to prevent the lid from being opened when there is pressure inside. When there is no pressure, this valve decreases.

- 5. Anti-blocking cover: Safe and reliable, easy to install, making the exhaust pipe less prone to blockage and ensuring smooth exhaust.
- 6. Exhaust pipe: Pressure cooker steam outlet device.
- 7. Pressure limiting valve: A device for regulating water pressure.
- 8. Pot lid: Made of high-quality stainless steel. It can only be used after being properly fastened to the pot body.
- 9. Trigger component: Open and close, it can close or open the lid of the pot.
- 10. Pot body: Used for storing and cooking food, strong acid and alkali resistance, sturdy and durable, not easily corroded.

6. Maintenance instructions

6.1 Clean

After each use, the food should be taken out promptly and the pressure cooker should be cleaned to prevent residual food from becoming moldy and causing a bad smell. When cleaning the pressure cooker, please do not use warm water or a mixture of warm water and detergent. Do not use any abrasive objects such as steel wool or sand, as this may damage the pot body and affect its appearance. Especially when cleaning the pot lid, be careful to avoid damaging the rubber components.

6.2 Exhaust pipe and anti-blocking cover

After each use, please remove the lower pressure valve to check for dirt accumulation. If there is, please clean it thoroughly and open the anti-blocking cover, turn the light source, and check whether the exhaust pipe hole and anti-blocking cover are blocked. If there is blockage, it can be cleaned with water, bamboo sticks, and brushes.

6.3 Stop opening the safety valve

Check the safety valve when after each use. If it is not clean, please clean it. You can flush the safety valve when the valve is in the rising state to drain blockage. If it is not clean, please clean it repeatedly. After draining, keep pushing the safety valve core with the index with your fingers to check that the valve core is moving smoothly. If it cannot move, replace the safety valve of our company if necessary.

6.4 Sealing ring

After use, rinse with hot water and detergent, and place it in the pot lid according to the correct method. Be careful not to tilt, hang or space it to prevent deformation.

Attention: Please do not neglect the sealing gasket's present deformation. It is recommended that the use time of the sealing gasket should not exceed two years.

6.5 Save

After use, please clean and store the pressure cooker. When saving, it is recommended to open the pot body and for storage.

7. Difficulty explanation

PROBLEM	PROPER REASON	DISPOSAL METHOD
Insufficient frequency of the drive	Excessive frequency	Reduce frequency
Insufficient reaction of the pot or heating	The position of the safety valve is incorrect or not closed	Adjust the position of the safety valve to be correct and closed
The pressure cooker does not apply pressure, and the safety valve does not rise	The sealing ring has not been changed through, and there is no impact on the pot body or the exhaust pipe	Remove the seal ring and the safety valve, clean the corresponding part of the safety valve, and adjust the safety valve to the correct position
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
The pot body and lid are not closed	The pot body and lid are not closed properly	Align the lid and pot body of the pot, press down on the trigger to ensure that the lid is closed, and then the lid is closed (check the corresponding part of the "Instructions for Use")
